

SurfSafe® - Stay safe online

1. Choose, use and protect your passwords carefully, use a different one for every online account in case one or more get hacked.
2. Look after your mobile devices. Don't leave them unattended. Protect them with a PIN or passcode or fingerprint.
3. Ensure you always have internet security software up to date and active on your computers.
4. Don't assume Wi-Fi hotspots in places like cafes, bars and hotels are secure, so never use them when you're doing anything confidential online. Instead, use 3G or 4G - or if it's for work, use a VPN (virtual private network).
5. Never reveal too much personal or financial information in emails, on social networking, on dating sites or in person. You never know who might see it, hear it or use it.
6. Always remember that people aren't always who they claim to be when online. Fake emails are a favourite way for fraudsters to approach their victims.
7. Don't click on links in emails, posts, tweets or texts and don't open attachments if the source isn't 100% known and trustworthy, or it seems strange that you'd be receiving them.
8. Never pay for anything by direct bank transfer – including goods, services, tickets, travel and holidays – unless it's to someone you know personally and is reputable.
9. Take your time and think twice, because everything may not be as it seems.
10. Remember that if something seems too good to be true, it probably is.
